New android version name list

The next version of Android is a major release, and after years 4.x, Google is ready to go to Android 5.0 under the name of another sweet treat - Lollipop, according to reliable sources speaking on behalf of Bulgarian tech insider Nixanbal. Google continues the tradition of naming Android versions in consecutive alphabets, and Lollipop comes after the following releases: Android 4.4 KitkatAndroid 4.1-4.3 Jelly BeanAndroid 4.0 Ice Cream SandwichAndroid 3.0 HoneycombAndroid 2.03 GingerbreadAndroid 2.2 FroyoAndroid 2.0-2.1 EclairAndroid 1.6 Doughnut Android 1.5 Cupcake The first version was simply called Android 1.0 and 1.1 without known public names. Of course, the version number or name doesn't come as a huge surprise, but getting confirmation from a source with a rather spotless reputation (the same source had big scoops that turned out to be true about the LG G3, among others), is definitely appreciated. As reputable as this rumor is, we still advise you to take a healthy grain of salt, as last-minute changes are always possible. The new version of Android will be revealed on Google I/O today - stay tuned when the event starts at 9:00 am PT | 12pm ET today and you can watch the 2014 I/O livestream here. Source:Nixanbal (translated) SUBSCRIBE to our NEWSLETTER! You're a busy professional. From sales meetings to picking up a suit on the cleaners' way home, every day is filled with countless tasks that need to be done. The good news is that a good task manager app installed on your Android tablet will help you stay in the task all day and remind you when something important needs to be taken care of. We've put together this list of 10 useful Android tablet task management apps to keep up with time in important – but often easy to forget – daily work and homework. All are free, although some have free professional versions. Vangie Beal, based in Nova Scotia, has been covered by small businesses, e-commerce and Internet technology for more than a decade. Android phones have pretty ridiculous and similar-sounding names: Fascination, Indulgence, Sensation and Wildfire, not to mention variations of each name, such as Incredible, Incredible 2 and Incredible S. Are you as confused about them as we are? On the Intercom blog, they have created a humorous table that compares the names of Android phones to condom names - and the two are remarkably difficult to distinguish (plus you never look at an Android phone the same way anymore). But that does a good thing: clearly, Android manufacturers only choose names that sound sexy and don't struggle to separate phones. Pair these ridiculous names with variations of each phone (I'll talk to you, Samsung Galaxy S II Skyrocket), and it's almost impossible to tell the difference between each phone. This has become a reality on almost all Android phones where exceptions (thunderbolt, for example, was somewhat descriptive to such an extent that it was Verizon's first 4G smartphone with lightning-fast speed). Are you as confused as we are? What kind of names would you like to see on smartphones? Vote in the comments below and press the link to see the size Is it a condom or is it Android? table. What's in the name? | Intercom BlogG/O Media can get the Commission Last updated 27.11.2020 Where you work has a huge impact on your work loss – your ability to focus (and stay focused) and your overall ability to be productive. This means that designing your office, whether you're working at home or in a larger corporate environment, is very important. This is not just about Feng Shui, it is about producing results and getting things done. According to studies carried out in the workplace and in productivity, the most significant factor in determining an employee's concentration is their physical environment. In fact, it has been said that a well-designed office can increase your productivity by about 20%. However, despite surveys and statistics, nearly half of the employers interviewed do not consider workplace planning to be a good business investment. So what can a productivity hacker do? What if you work in an environment that doesn't promote concentration? Check these 15 factors and make changes where you can. A small adjustment can have a lot of impact. LightingLighting is one of the most important factors to stay focused and feel inspired to create, but it is one of the most overlooked and least invested. Poor lighting can cause fatigue, heartburn in the eyes, headaches and general irritability. Dark spaces can actually cause depression. If you work in a company office: You probably don't have control over general lighting, so bring yours if necessary. Consider using natural light bulbs or a light conditioner. If you work from your home office: Open the windows and doors and let the natural light in. Using lamps in several areas on cloudy days or in the dark. Chair and tableif you've ever sat at a desk to work, but found yourself adapting, stretching and moving too often to stay focused, you're aware of how important it is that you have a properly installed table and chair. In today's work environment, where so many of us sit most of our day, it's important that your throne is likely to fit your body. Consider these quick ergonomic checks: Eyes 24-36 inches from your computer screen. The top of the screen should be below or at the level of the eyes. The feet should be in the footrest or rest on the floor. A slightly leaned chair position is best to reduce spinal pressure and minimize lower back pain. If you work in a company office: Ask for an adjustable chair. Add pillows to your lower back or butt if you need it. Many companies also offer risers to computers adjusting the screen height (and a separate keyboard that keeps hands and wrists in the ideal position)if position)if from the home office: Place in a decent chair or use at least a few pillows for the chair. If the table is too high, add the pillows to your chair. If it's too low, consider buying leg lifts from your local hardware store and using books under your computer to raise the screen. Use a separate keyboard. Your mother was right, it's important to clean your room. A mess can help the creative mind create, but it doesn't necessarily help concentration and productivity. If you work in a business office: Even if you can't control the cleanliness of the office, keep your surroundings around you clean. Spend 10 minutes each morning or evening making sure things are put away, archived, arranged and usually out of sight so you don't disturb it later. If you work from a home office: Because you work from home, the whole house or apartment can be disturbed. If you can afford it, hire a professional cleaning service to keep your home clean. If not, book a certain day and time to clean your home. Commit to making a daily pickup at a certain time. And spend at least 10 minutes every day to make sure your office is organized and tidy. The color colors of the room around us have an effect on our mood and brain activity. It provokes both a physical and an emotional reaction. So choosing the right colors for your workspace can affect your productivity. Blue, for example, is said to be illegal productivity. Too much of anything can be overwhelming, even colored. If you work in a business office: Bring products from home that are a certain color that inspire you and keep you focused. Use postcards, newspaper clippings, even just color blocks. If you work from a home office: If you work from home, you have much better control over the colors around you. Consider repainting the wall, adding a color to the work table, or mastering a specific color to hang pictures. Room TemperatureMost offices keep their temperature around 65-68 Fahrenheit, but it turns out this may not be good for productivity. Warmer rooms make people more productive. If you work in a company office: Most offices are regulated by someone else, so bring a space heater, sweaters and blankets to your workspace. If you work from a home office: Depending on the season, open the windows or adjust the heat or air conditioning so that you are more comfortable and warmer. Assemble sweaters in winter or add a space heater to your feet. Room fragrances Like the color of the workspace, our sense of smell can strongly affect our mood, mindset and therefore our productivity. Consider adding fragrances to the workspace to make your mind more specific when you start to notice yourself drifting away. Try using these fragrances to stay focused: Pine – Increase vigilance Cinnamon – Improves concentration Lavender – Helps relax you during a stressful workday Peppermint – Boosts your mood citrus fruits (anything) – Wakes you up raise raises If you work in a company office: Most people don't appreciate the added scents to their work environment, so you have to keep it subtle. Keep the essential oils in your bag or box and when you need speed, put a few drops in a handkerchief or cotton ball. If you work from a home office: Use candles, incense or essential oils. You can also simmer herbs and spices in the kitchen to fill your home with a warm smell. Noise level The noise level of the working environment can vary greatly depending on the size of the team, office design and company culture. But make no mistake, the noise around you affects your ability to stay on the mission. addition to being disruptive, it can also raise stress levels, making it difficult to maintain productivity. If you're working in a business office: Import noise absorption headphones and use music services like Spotify or Songza, and choose focus-boosting sounds like white noise. Find out if your office offers quiet workspaces when you need extreme concentration. If you work from a home office: Sometimes total silence can be as disturbing as an office. Use a service like Coffitivity to mimic the noise in the café, which is said to help with the concentration. Air QualityAir's quality can have a significant impact on our ability to focus and our clear ability to think. Get this: OSHA estimates that the total annual cost of poor air quality in office environments costs employers \$15 billion due to employee inefficiencies and sick leave. It's serious business. If you're working in a business office: Talk to them about installing air filters. If there is a way to bring fresh air through windows or doors, arrange for them to be opened at least part of the day. If nothing else, get a personal air filter on or near your desk. Also get a factory (or better yet, get a company to buy and use more plants in the office!). Plants are good at filtering air and providing clean, purified oxygen. If you work from a home office: Open the windows and doors and let some fresh air in. Install an air filter or get a portable air filter that's close to your desktop. You should get a plant, too. Different spacesIf you can control it, give yourself more than one space to work. Putting yourself in a new state with different features and things to look at will literally change your brain and help you stay focused. If you work in a company office: Many offices offer a variety of work environments: personal space, lounges, break rooms, meeting rooms, kitchens and dining areas, and if you're lucky, they also offer lounges. Use all these modes to change your routine. Make sure your manager knows so they don't think you're loosening up and know tat that you're really getting more done! If you work By hand: If you are working at the desk, add a comfortable sofa or chair to the room. If your space is less flexible or very small, think of more creative ways your workspace. Rotate pictures on your walls every couple of days. Sit on the other side of your desk. Get a lamp and several colored lamps. Or go to work in a café, library or park. PeopleMost employers organize employees around a job or in specific departments. Instead, studies show that people are more creative and productive when they sit with colleagues with the same goal or customer. Not only can you get answers and create solutions faster, but because you're directly accountable to the people around you, you're more likely to stick to the task and be productive. If you work in a company office: Ask your employer if you can try grouping your group into a conference room for a day or a week. You will receive feedback from everyone involved. View the results. If your business doesn't make permanent adjustments, maybe they'll let you work together a couple of times a week when the meeting room or lounge is free. If you work from a home office: This is a little harder because when you work at home, you're not with colleagues. However, you can digitally recreate a similar space. Create a Skype group and log everything in during working hours. You can do morning responsibility and check-in while being available for questions, finding solutions, and general banter that promotes creativity. Idea Warehouse Have you ever worked hard when the idea suddenly bothers you? At first you try to push it away, but then the next thing you know, you're 20 pages deep in the online search for the topic. Ideas should be encouraged and cultivated, but when they come into the middle of another task, it can be incredibly disturbing. Instead, create a place where you can save your ideas, which are easy to use from your workspace. For both the company and the home office: Keep paper pads around you, take a chalk wall, get a white board – once you have a spark of inspiration, write it down straight away to get it out of your head and then go back to the task at hand. Then at the end of the day or when you have free time, collect all the ideas and check them out. With a little time and space, you can better decide whether it's worth pursuing or better to leave it on the back burner. Refreshment Our brains need nourishment to continue, especially when we drive fast and stay focused. You can only let the growing stomach continue as long as the brain shuts down. Stating that it's different than wanting your car to keep driving without you have to stop and fill it with gas. A new idea, but not realistic. If you work in a company office: Make snacks in advance for the day and/or week. Or bring prepackaged snacks. Keep in mind that junk food has diminishing yields, so if you buy food prepackaged, think nuts, fruits, involuntary yogurt, as well as hummus and biscuits. Most likely, your business offers coffee, tea and water, so you don't have to worry about delivering it to yourself. Home Office: If you work from home, this can be a key distraction. Try to reduce the number of times you walk into the kitchen every day. To do this, keep quick and easy snacks pre-prepared or prepackaged and close to your desk. Keep the water bottle close. And consider bringing a kettle to your office and singing tea and coffee so you don't want to wander around the house and lose time poking through the pantry. That nature We are biological beings above all else. So we are deeply concerned about our access (or lack thereof) to the natural world. It is important for our psychological and physiological function, which directly affects our ability to be productive. If you work in a business office: If you don't have windows in or near your workspace, bring pictures from the outside world. Keep a picture of something natural as a screen saver and/or desktop background. Walk outside for lunch or between major tasks. Just a few minutes outside in fresh air and sunshine can improve our mood and shake the doldrums. Be sure to add the plant to your table as well! If you work from a home office: Keep the shades open and get some fresh air if you can. If you don't see anything natural from your window, consider images of the natural world as a screen saver and/or desktop wallpaper. Go for a walk. Or step outside and put your feet on the ground. Put plants in your office – studies show that living plants in your office make you more productive, happier and less stressed. Digital space For most people, our primary work is located on our laptops and in our physical environment simply as a backdrop to our digital lives. Make sure your computer has software that allows you to cart the digital environment that best generates productivity. Use this or similar focus apps to reduce distractions. You can also plan your day by using time intervals with an app like this to keep you in the high hour throughout the day. Featured photo credit: Phil Desforges unsplash.com unsplash.com
